# FOREIGN AGRICULTURAL TRADE

OF THE UNITED STATES

### Digest

Growing Farm Exports to the Enlarged European Community (see p. 5). With the United Kingdom, Ireland, and Denmark becoming members of the European Community (EC) on January 1, 1973, the enlarged EC represents a market for over one-fourth of U.S. agricultural exports. They totaled \$2.73 billion to the nine EC members in 1972, a gain of 15 percent over a year earlier. The increase occurred in both the variable-levy commodities and nonvariable-levy commodities. Exports of variable-levy items totaled \$718 million, 12 percent more than a year earlier. Feed grains accounted for most of the increase, but wheat and poultry and products also advanced. Exports of nonvariable-levy items rose 15 percent to \$2.01 billion. Soybeans and soybean products gained the most. Fresh fruits, canned fruits, cattle hides, tobacco, variety meats, nuts, and corn byproducts also rose substantially. Of course, exports to the United Kingdom, Ireland, and Denmark in 1972 or prior years were not affected by the variable levies.

\* \* \* \* \*

Expanding Trade with Canada (see p. 33). U.S. farm exports to Canada gained momentum in 1972, bringing the value of U.S. exports to Canada to more than twice the value of imports.

The steep increase was spearheaded by larger sales of horticultural crops and preparations, meat and preparations, corn, and hides and skins. Gains in these and other commodities more than offset declines in cotton, oilseeds, and vegetable oils.

Live animals, meat and preparations, barley, and bakery products remain the major U.S. farm imports from Canada. The general pattern of U.S.-Canadian agricultural trade is not expected to change significantly in the future.

\* \* \* \* \*

<u>Spain-A</u> <u>Thriving Commercial Customer</u> (see p. 42). Spanish agricultural imports approached \$1.0 billion in 1971, and preliminary data indicate imports of about \$1.2 billion in 1972, featuring feed grains, soybeans, and livestock products (primarily beef). Although the U.S. share of Spain's agricultural imports has been declining, we remained the largest single supplier, providing about one-fourth. U.S. agricultural exports to Spain hit a record-high \$300 million in 1972. Soybeans and feed grains accounted for four-fifths of this total.

Spain has also become a large agricultural exporter--\$811 million in 1971. We took \$131 million worth in 1972, mainly olives, olive oil, and wine.

Spain's current agricultural situation suggests continued increases in imports of feed grains and soybeans to meet growing demand for feed concentrates. Strong competition to U.S. feed grains is expected, but U.S. soybeans should continue to dominate the market. Other bright spots in the Spanish market for U.S. farm products are tobacco, hides and skins, tallow, and cotton.

\* \* \* \* \*

Government-Program Export Highlights, 1972 (see p. 53). U.S. exports of farm products in calendar 1972 rose \$1.7 billion to a record \$9.4 billion. All of the rise was in commercial shipments.

Exports under P.L. 480 amounted to \$1.1 billion (preliminary data), unchanged from a year earlier. Local currency sales fell sharply, but long-term dollar credit shipments moved upward. Donations under Title II were substantially above 1971, but barter sales declined to \$888.9 million. CCC credit sales were up considerably.

\* \* \* \* \*

Selected Price Series of International Significance (see p. 78). Complex price movements of U.S. wheat, corn, and soybeans, c.i.f. U.K., resulted in lower average prices during February than during January. Actually, wheat and corn prices had started a price decline well before devaluation. Wheat prices rallied after devaluation; corn prices were affected by the imminent harvest of a large crop in Argentina, and the quotation of soybeans shifted from 1972 to 1973 crop beans. The spot soybean meal price, c.i.f. Rotterdam, rose 17 percent.

Prices of rice, cow meat imported into the United States, and rubber rose 10-11 percent. Most other products showed more moderate price increases. Sugar prices dropped slightly, but world sugar continued to be higher priced than sugar destined for the United States.

\* \* \* \* \*

Agricultural Exports Were Up 41 Percent in July-February (see p. 82). For the fifth month in a row, U.S. agricultural exports established a new monthly record. Agricultural exports in February reached an alltime high of \$1.18 billion, 4 percent above the January's record and 65 percent above February 1972. For July-February, agricultural exports reached a record \$7.48 billion, two-fifths above a year earlier. Grains alone accounted for nearly two-thirds of the total value increase during July-February. In addition, soybeans, cattle hides, meats, soybean meal, nuts, cotton, poultry products, fruits, and vegetables also rose substantially. Tobacco exports were about equal to the level of a year earlier, while dairy products, animal fats and oils, and vegetable oils were down sharply. The total volume of U.S. agricultural exports gained nearly one-fourth and accounted for nearly 60 percent of the value gain, and higher prices made up the remainder. Substantial price increases occurred for soybeans, soybean meal, grains, fruits, nuts, vegetables, cattle hides, and tobacco.

\* \* \* \* \*

Higher Prices Caused 13-Percent Increase in U.S. Agricultural Imports (see p. 92).

During July-February, higher prices increased U.S. agricultural values 13 percent above the \$4 billion level of the year-earlier period. Competitive farm products gained 16 percent to \$2.9 billion, while noncompetitive items rose 8 percent to \$1.6 billion.

## SPECIAL in this issue

#### GROWING FARM EXPORTS TO THE ENLARGED EUROPEAN COMMUNITY

bу Dewain H. Rahe 1/

With the United Kingdom, Ireland, and Denmark becoming members of the European Community (EC) on January 1, 1973, and with the adoption of the Common Agricultural Policy (CAP) by the new members on February 1, it is an appropriate time to look at the magnitude and trends of our agricultural trade with the three new members, original six members, and the enlarged EC. U.S. agricultural exports to the nine EC members rose to \$2.73 billion in 1972 from \$2.3 billion a year earlier -- a gain of 15 percent. While the relative share of our exports to the EC has trended downward in recent years, the growth and magnitude of this trade are very important to American agriculture. In 1972, U.S. exports to EC represented nearly one-third of U.S. commercial exports.

Our trade balance with the enlarged EC was in deficit in 1972 by \$783 million. contrasted with surplus balances of \$536 million a year earlier and \$1.2 billion in 1962. The decline came about with substantial gains in U.S. imports of nonagricultural products, which surpassed the growth in U.S. exports of these products. Nonagricultural imports rose to a record \$11.6 billion in 1972 from \$9.8 billion in 1971 and only \$3.3 billion in 1962. The nonagricultural trade balance swung to a record deficit of \$2.7 billion in 1972 from only \$90,000 in 1962. The U.S. agricultural trade balance, on the other hand, gained over \$200 million to reach an alltime high of \$1.9 billion in 1972. This was the third year in a row that our agricultural trade balance with the enlarged EC gained.

For more details on the important changes in agricultural trade policies, the transition of the new members' agricultural systems, and structure of the CAP, see the October 2, 1972, issue of Foreign Agriclture.

#### <u>Variable-levy</u> <u>Commodities</u>

U.S. exports of variable-levy items to the enlarged EC totaled \$718 million in 1972, up 12 percent from a year earlier and well above \$442 million in 1969, but considerably below the record of \$847 million achieved in 1966. Most of the increase in 1972 occurred in feed grains, but exports of wheat and poultry and products also advanced. Most other items were down. Nearly all of the increase in poultry exports occurred for processed turkeys to West Germany and the United Kingdom. Of course, exports to the United Kingdom, Ireland, and Denmark in 1972 were not subject to the variable levies. The original members took \$539 million--three-fourths of the total. Except for the increase since 1971, U.S. exports of products subject to variable levies have declined since the 1966 record. But exports of these products to new members of the

<sup>1/</sup> Agricultural Economist, Statistics Branch, Foreign Demand and Competition Division, Economic Research Service.

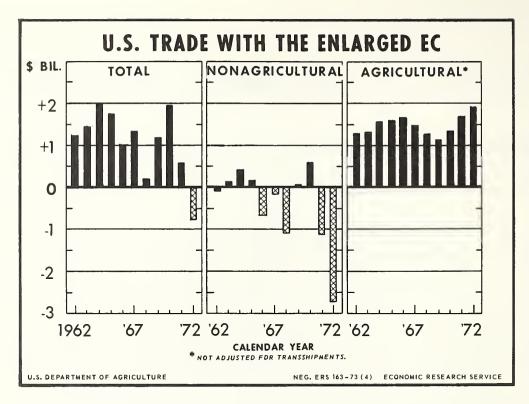

Figure 1

EC have generally fluctuated widely and have remained relatively stable in the past decade.

Feed grains--Exports of feed grains to the enlarged EC in 1972 totaled \$487 million compared with \$402 million in 1971 and \$604 million in 1966. Feed grain exports to the original members totaled \$395 million in 1972 compared with \$345 million during the previous year and the record \$476 million during 1966, when importers purchased very large quantities in anticipation of the unification of EC grain prices. During the next 3 years, exports turned down and totaled only \$225 million in 1969, the lowest level since the EC was established. Exports have since turned up. Despite increased production and high prices for grains in the EC, demand continues strong for imported grain. From 1969 through 1971, total feed grain imports increased 27 percent to 18.4 million tons. Intra-EC trade (trade between members) was up 24 percent to 4.8 million tons and feed grain volume from the United States was up 28 percent to 6.5 million tons. These U.S. exports also include transshipments, which have been increasing in recent years.

A considerable part of the 1972 increase went to Italy. Italy received a discount on variable levies of \$7.50 per ton, making it more economical for Italy to import coarse grains from the United States than to purchase them from EC countries. However, the use of feed grains as an ingredient in mixed feeds has declined sharply in recent years. The Netherlands, for example, used only about 35 percent feed grains in its mixed feeds in 1972 compared with about two-thirds in the mid-1960's. There has also been a substantial increase in nongrain feeds such as beet pulp, corn byproducts, bran, manioc, and other grain products, because of extremely high feed grain prices. Among nongrain ingredients, manioc, for example, could be purchased last year for around \$80 a ton, compared with the average corn price in Rotterdam of over \$100 per ton. At the same time, EC coarse grain production increased to 43.5 million tons in 1972 compared with

<sup>4/</sup> Although canned poultry, tallow, and variety meats are subject to variable levies, these cannot exceed the amount of import duties bound in GATT.

5/ Variable levy on sugar-added content.

6/ Mainly corn gluten feed and meal, which are nonvariable-levy commodities; but may contain small quantities of other corn products, subject to variable levies (see "Export Highlights, March 1970").

<sup>1/</sup> Preliminary.
2/ Grains, poultry, and pork were subject to variable levies beginning on July 30, 1962; rice on Sept. 1, 1964; and beef and dairy products, on Nov. 1, 1964.
3/ Lard for food is a variable-levy commodity, while lard for industrial use is bound in the General Agreement on Tariffs and Trade (GATT) at 3 percent ad valorem. U.S. lard is for food use.

<sup>4/</sup> Although canned poultry, tallow, and variety meats are subject to variable levies, these cannot exceed the amount of import duties bound in GATT.

5/ Variable levy on sugar-added content.

6/ Mainly corn gluten feed and meal, which are nonvariable-levy commodities; but may contain small quantities of other corn products, subject to variable levies (see "Export Highlights, March 1970").

<sup>1/</sup> Preliminary.
2/ Grains, poultry, and pork were subject to variable levies beginning on July 30, 1962; rice, on Sept. 1, 1964; and beef and dairy products, on Nov. 1, 1964.
3/ Lard for food is a variable-levy commodity, while lard for industrial use is bound in the General Agreement on Tariffs and Trade (CATT) at 3 percent ad valorem. U.S. lard is for food use.

:								

<sup>4/</sup> Although canned poultry, tallow, and variety meats are subject to variable levies, these cannot exceed the amount of import duties bound in GATT.

5/ Variable levy on sugar-added content.

6/ Mainly corn gluten feed and meal, which are nonvariable-levy commodities; but may contain small quantities of other corn products, subject to variable levies (see "Export Highlights, March 1970").

<sup>1/</sup> Preliminary.
2/ Grains, poultry, and pork were subject to variable levies beginning on July 30, 1962; rice, on Sept. 1, 1964; and beef and dairy products, on Nov. 1, 1964.
3/ Lard for food is a variable-levy commodity, while lard for industrial use is bound in the General Agreement on Tariffs and Trade (GATT) at 3 percent ad valorem. U.S. lard is for food use.

:								

<sup>4/</sup> Although canned poultry, tallow, and variety meats are subject to variable levies, these cannot exceed the amount of import duties bound in GATT.

5/ Variable levy on sugar-added content.

6/ Mainly corn gluten feed and meal, which are nonvariable-levy commodities; but may contain small quantities of other corn products, subject to variable levies (see "Export Highlights, March 1970").

<sup>:
2/</sup> Preliminary.
2/ Grains, poultry, and pork were subject to variable levies beginning on July 30, 1962; rice, on Sept. 1, 1964; and beef and dairy products, on Nov. 1, 1964.
3/ Lard for food is a variable-levy commodity, while lard for industrial use is bound in the General Agreement on Tariffs and Trade (GATT) at 3 percent ad valorem. U.S. lard is for food use.

<sup>4/</sup> Although canned poultry, tallow, and variety meats are subject to variable levies, these cannot exceed the amount of import duties bound in GATT.

5/ Variable levy on sugar-added content.

6/ Mainly corn gluten feed and meal, which are nonvariable-levy commodities; but may contain small quantities of other corn products, subject to variable levies (see "Export Highlights, March 1970").

<sup>1/</sup> Preliminary.
2/ Grains, poultry, and pork were subject to variable levies beginning on July 30, 1962; rice, on Sept. 1, 1964; and beef and dairy products, on Nov. 1, 1964.
3/ Lard for food is a variable-levy commodity, while lard for industrial use is bound in the General Agreement on Tariffs and Trade (GATT) at 3 percent ad valorem. U.S. lard is for food use.

<sup>4/</sup> Although canned poultry, tallow, and variety meats are subject to variable levies, these cannot exceed the amount of import duties bound in GATT.

5/ Variable levy on sugar-added content.

6/ Mainly corn gluten feed and meal, which are nonvariable-levy commodities; but may contain small quantities of other corn products, subject to variable levies (see "Export Highlights, March 1970").

<sup>1/</sup> Preliminary.
2/ Crains, poultry, and pork were subject to variable levies beginning on July 30, 1962; rice, on Sept. 1, 1964; and beef and dairy products, on Nov. 1, 1964.
3/ Lard for food is a variable-levy commodity, while lard for industrial use is bound in the Ceneral Agreement on Tariffs and Trade (GATT) at 3 percent ad valorem. U.S. lard is for food use.

<sup>4/</sup> Although canned poultry, tallow, and variety meats are subject to variable levies, these cannot exceed the amount of import duties bound in GATT.

5/ Variable levy on sugar-added content.

6/ Mainly corn gluten feed and meal, which are nonvariable-levy commodities; but may contain small quantities of other corn products, subject to variable levies (see "Export Highlights, March 1970").

<sup>4/</sup> Although canned poultry, tallow, and variety meats are subject to variable levies, these cannot exceed the amount of import duties bound in CATT.

5/ Variable levy on sugar-added content.

6/ Mainly corn gluten feed and meal, which are nonvariable-levy commodities; but may contain small quantities of other corn products, subject to variable levies (see "Export Highlights, March 1970").

<sup>1/</sup> Preliminary
2/ Grains, poultry, and pork were subject to variable levies beginning on July 30, 1962; rice, on Sept. 1, 1964; and beef and dairy products, on Nov. 1, 1964.

3/ Lard for food is a variable-levy commodity, while lard for industrial use is bound in the General Agreement on Tariffs and Trade (GATT) at 3 percent ad valorem. U.S. lard is for food use.

<sup>4/</sup> Although canned poultry, tallow, and variety meats are subject to variable levies, these cannot exceed the amount of import duties bound in GATT.
5/ Variable levy on sugar-added content.
6/ Mainly corn gluten feed and meal, which are nonvariable-levy commodities; but may contain small quantities of other corn products, subject to variable levies (see "Export Highlights, March 1970").

<sup>4/</sup> Although canned poultry, tallow, and variety meats are subject to variable levies, these cannot exceed the amount of import duties bound in GATT.

5/ Variable levy on sugar-added content.

6/ Mainly corn gluten feed and meal, which are nonvariable-levy commodities; but may contain small quantities of other corn products, subject to variable levies (see "Export Righlights, March 1970").

<sup>4/</sup> Although canned poultry, tallow, and variety meats are subject to variable levies, these cannot exceed the amount of import duties bound in CATT.

5/ Variable levy on sugar-added content.

6/ Mainly corn gluten feed and meal, which are nonvariable-levy commodities; but may contain small quantities of other corn products, subject to variable levies (see "Export Highlights, March 1970").

28.3 million tons in 1962. As a result, the United States has not shared in increased grain consumption in the EC. However, the share of grain in mixed feeds started to gain somewhat in late 1972 as protein meal prices skyrocketed to around \$300 a ton.

Wheat--U.S. exports of wheat to the enlarged EC have fluctuated sharply in recent years. In 1972, U.S. wheat exports totaled \$137 million compared with \$112 million in 1971 and \$159 million in 1966. Wheat exports to the original members were a record \$177 million in 1956, prior to signing of the Rome Treaty. Exports to the original EC countries have also fluctuated sharply since the inception of the CAP, but the general trend since 1967 has been downward (see table 2). Exports to the new members totaled \$43 million in 1972, down slightly from the \$52 million in 1971, but sharply above the \$3 million in 1969. Wheat production in the enlarged EC totaled 29.5 million tons in 1972, which was slightly larger than consumption in 1972. However, the nine EC members still import relatively large quantities of high-protein wheat for blending with soft wheat, to obtain desired baking qualities.

Rice--U.S. exports of rice to the enlarged EC totaled \$29 million in 1972, up about \$1 million from a year earlier. In recent years, U.S. rice exports have been declining to the enlarged EC, primarily because of decreases to the original members. Increased competition from foreign suppliers and higher prices from the variable levies, which gave a competitive edge to rice produced in France and Italy, discouraged U.S. rice exports to the original members. Exports to the new members have been relatively stable, in the range of \$10-12 million in recent years. Prior to 1970, U.S. exports of long-grain rice showed moderate gains, reflecting the preference of most North Europeans for this type of rice.

<u>Poultry</u>--U.S. exports of poultry products to the enlarged EC increased to \$15 million in 1972 from \$12 million a year earlier. Most of the increase occurred in turkey products to the United Kingdom and West Germany. Turkey products have been a big hit in these markets after being introduced through a market development program. Early in the year, the relatively low U.S. price stimulated exports of egg products to the United Kingdom. Exports of turkey parts and egg products also gained to the original EC members. These new products are helping to maintain our poultry-product exports to the EC. But overall, our exports of poultry products have declined steadily since the inception of variable levies in 1962. Prior to the imposition of the variable levies, the United States was competitive with other producers, including those in the EC. But now our poultry meat exports, for example, have to overcome a price shield of about 14 cents a pound provided by the variable levies. Poultry production among the original members has trebled due to higher prices and the protection produced by the variable levies. The EC is self-sufficient in poultry meat, except turkey, but the per capita consumption of poultry meat was only 25 pounds per person in 1972, half the U.S. levels.

#### Nonvariable-levy Commodities

Nonvarible-levy commodities in the enlarged EC accounted for three-fourths of the overall trade in 1972. Since the early 1960's nearly all of the growth in U.S. agricultural products to the EC has occurred in the nonvariable-levy items. In 1972, nonvariable-levy items totaled \$2.01 billion, up 15 percent from 1971 and more than double the 1962 value of \$955 million. Soybeans and soybean products have accounted for most of the gain in the nonvariable-levy products since 1962. Soybeans and soybean products totaled only \$249 million in 1962 compared with \$928 million in 1972. Overall, exports of commodities not subject to the variable levies have gained 10 percent annually since 1962. However, if the exports of soybeans and products were deducted from the total, exports would show only a slight increase over 1962. In 1972, exports of commodities not subject to variable levies, excluding soybeans and products, totaled \$1.3 billion, only slightly above \$1 billion total in 1962.

Oilseeds and products--U.S. exports of oilseeds and products to the enlarged EC advanced to \$1.06 billion in 1972 from \$950 million a year earlier. The original members took \$938 million of total--88 percent of total oilseed exports. The annual gain of about 10 percent has been the brightest spot of our EC farm trade since the adoption of CAP. With an annual gain of 10 percent in per capita income in EC member countries over the past decade, demand for meat and other livestock products has increased sharply. For example, per capita consumption of beef rose to 52.9 pounds per person in 1972 from 48.5 in 1962, pork to 59.5 pounds from 54.0, and poultry to 25 from 14.3 in 1962. This increased demand has been supplied, for the most part, from increased production of meat, dairy products, and poultry in the EC. Relatively high EC grain prices encouraged the substitution of nongrain feeds, which require more protein supplements. Other protein sources, mainly fishmeal and peanut meal, were in short supply, generally cost more than U.S. soybeans, and are less well-suited for poultry feeding. The EC imports nearly all of protein supplements for the mixed feed industry, with the United States supplying about 60 percent of these imports.

The enlarged EC--the most important market for U.S. soybean meal--took \$271 million worth in 1972; the original members accounted for over 90 percent. Exports dropped slightly from the previous year because of tight U.S. supplies and higher prices. More EC meal has come from the crushing of U.S. soybeans. With demand for protein meal growing at a faster rate than demand for oil, the EC will likely to continue to import large amounts of meal. Demand for meal may also gain in the new member countries as implementation of the CAP raises feed grain prices in these countries. U.S. exports of vegetable oils fell by \$10 million in 1972. Both soybeans and cottonseed oils dropped sharply in 1972. Increased oil available from the crushing of U.S. soybeans was the principal reason for the decline, but more vegetable oils were also available from other sources. At the same time, production of animal fats in the EC rose substantially, reducing import requirements.

<u>Tobacco</u>--U.S. tobacco exports to original EC as well as to the new members hit a record level of \$338 million in 1972. This 17-percent gain was concentrated in the United Kingdom, Italy, Ireland, and Denmark. Exports to West Germany were about the same as in 1971, but were off sharply to other members. Most of the gain was in flue-cured tobacco, but burley, Virginia flue-cured, and miscellaneous tobaccos also advanced in 1972. Overall, the enlarged EC accounted for about one-half of U.S. unmanufactured tobacco exports in 1972.

There is considerable uncertainty about the future of U.S. tobacco exports to the enlarged EC. First, the tobacco CAP encourages use of domestic tobaccos by providing high price supports with buyer's premiums (a discount for the purchase of domestic-grown leaf). Next, the EC tobacco preference will be extended to the Commonwealth countries and the EC preferences to African countries will be extended to include the new members. These countries have been expanding their tobacco production for export to the enlarged EC.

Cotton--U.S. cotton exports to the enlarged EC totaled \$70 million in 1972, about the same as a year earlier, but substantially higher than in 1969 and 1970. The original members were the most important customers, with nearly 90 percent of the total. The higher level of exports was reached in 1972 because of limited supplies available from other major producers and a pickup in demand for cotton. U.S. cotton exports to EC have trended downward for two decades. Increased competition from expanded production in developing countries and gains in the use of manmade fibers have contributed to a decline in cotton's share of total EC fiber use. For example, cotton now accounts for around one-third of the total fiber use in the enlarged EC compared with over one-half in 1960.

Fruits and preparations -- U.S. exports of fruits and preparations to the enlarged EC rose to \$94 million in 1972 from \$80 million a year earlier. Canned, dried, and fresh

citrus fruits all showed big value gains during 1972. But higher prices accounted for most of the gain in canned and dried fruits. About three-fourths of the total and most of the gain in 1972 went to the original members. Increased production within the EC and preferential treatment for many Mediterranean countries have slowed the growth in U.S. fruit exports to the EC. South Africa and Australia have expanded their shipments to the EC.

<u>Vegetables</u>--U.S. exports of vegetables rose to \$47 million in 1972. Dried peas and hops accounted for the gain. The new members took nearly half of the total. The United Kingdom is the top foreign market for U.S. dried beans and peas.

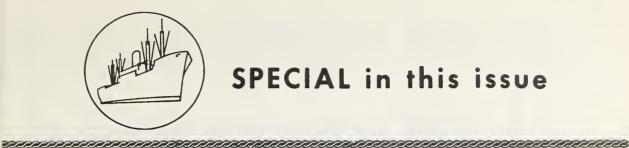

Nuts--U.S. exports of nuts to the EC rose to \$44 million in 1972, with walnuts and almonds achieving the gain. A drop in European production and large U.S. output at attractive prices (brought about by improved methods of production) increased the U.S. competitive position in international markets. The enlarged EC took nearly one-half of U.S. nut exports in 1972.

Hides and skins--U.S. exports of hides and skins to the enlarged EC were up 55 percent in 1972 to \$76 million. Nearly all of the value gain stemmed from higher prices, since quantity was about the same as a year earlier. The Argentine embargo on cattle hide exports created shortage in most major importing countries. Since the United States is the only other major supplier, prices for U.S. cattle hides were bid up sharply in 1972.

<u>Tallow</u>--U.S. tallow exports fell 17 percent to \$32 million in 1972. Larger production of animal fats in the EC and lower prices reduced import needs in 1972.

<u>Variety meats</u>--Exports advanced to \$75 million in 1972 from \$66 million a year earlier. Increased demand for meat was the principal reason for the increase. European demand for these meats is strong for use in many specialty products and preparations. But higher prices accounted for most of the value gain.

<u>Corn byproducts</u>--U.S. exports of corn byproducts, primarily corn gluten feed not subject to the variable levies, rose 50 percent to \$52 million, with all going to the original members. Since the U.S. price of corn gluten feed is well below the price of grains, feed manufacturers in the EC find it very profitable to substitute it for the high priced grains.

## SPECIAL in this issue

#### EXPANDING TRADE WITH CANADA

bν Omero Sabatini 1/

Canada is generally the third largest market for our agricultural exports, after Japan and West Germany. We provide more than half of Canada's agricultural imports, and our sales of farm products to Canada are on the uptrend. The rate of increase quickened last year, when exports excluding transshipments rose by nearly 18 percent--to an unprecedented level of \$716.1 million (table 12). Annual increases for the previous 3 years averaged 7 percent.

The steep climb in 1972 resulted from a combination of generally higher prices and larger shipments of most leading exports, which were stimulated in some cases by smaller Canadian production.

Roughly 75 to 80 percent of U.S. agricultural sales to Canada supplement Canada's own farm production, and roughly 75 percent of U.S. exports, by value, consist of about 10 commodities or groups of commodities.

Horticultural crops and preparations (primarily fresh oranges, fresh grapes, frozen orange juice, fresh tomatoes, and lettuce) account for more than 40 percent of the total value and are by far the most important group. The other principal products, ranked by their 1972 export value, are: cotton, soybeans, beef (including small amounts of veal), live cattle, soybean cake and meal, corn, pork, cattle hides, rice, furskins, and peanuts.

Exports of horticultural products showed the largest increase in value in 1972, followed by exports of meats and meat preparations, corn, and hides and skins; sales of cotton, soybeans, and vegetable oils declined.

Horticultural products. -- Poor Canadian crops stimulated U.S. sales of these products to Canada in 1972. Canadian production of 15 main vegetables was down for the second year in a row because of generally poor growing conditions. Output of most fruits also was down last year.

Smaller Canadian supplies and reduced production in parts of the United States (also caused by adverse weather) helped push up Canadian prices as well as imports. This situation should prevail through the remainder of the current marketing season and U.S. exporters should continue to benefit from Canada's expanded import requirements for these items -- both fresh and processed.

(A case in point is Ontario's temporary lifting of the ban on imports of grapes or concentrates for commercial winemaking. Imports of up to 18,000 tons of concentrates will be permitted through September 1.)

Canadian demand for fruits and vegetables will inevitably be greater than local supply, because of high Canadian incomes and production limitations imposed by the climate. Demand may be stimulated by the newly created Fresh-For-Flavor Foundation. The immediate goal of the foundation is to increase annual per capita consumption of fruits and vegetables (including potatoes) by nearly 15 percent, to about 400 pounds. The initial promotional effort of the Fresh-For-Flavor Foundation is financed jointly by the Federal and Provincial Governments, growers, distributors, and importers.

The United States is the dominant supplier of horticultural products to Canada, and Canada is our largest foreign outlet for these commodities. However, our share of this market has declined in the past several years (table 13), with drastic losses for tomato paste, canned asparagus, fresh tomatoes, fresh cucumbers, fruit cocktail, canned pineapple, and canned peas; and virtual elimination in the market for canned mushrooms.

Mexico has made the largest inroads into the Canadian market for fresh vegetables; Taiwan and South Korea in canned vegetables; Malaysia, Australia, and New Zealand in canned fruits. Israel also has made gains in citrus fruit.

The erosion of the U.S. relative position has resulted, in part, from the improvement of the competitive advantage enjoyed by the developing countries involved. These same countries have also made substantial inroads into the U.S. market in competition with our domestic producers. The preferential tariffs enjoyed in Canada by members of the (British) Commonwealth also had an adverse impact on our competitive position. 2/ These preferential tariffs are still in effect.

U.S. fruits and vegetables enter Canada relatively free of restrictions. These products normally are subject to specific duties during the Canadian season and to ad valorem duties for periods of varying length within any year.

The ad valorem duty on out-of-season fruits and vegetables was suspended for 1 year effective February 20, 1973, but the specific duty will continue to apply. The temporary suspension of the duty on out-of-season fruits and vegetables, along with the suspension of duties on selected other foods and consumer items, is part of a government effort to stem the rapid rise in the Canadian cost of living.

On occasion, Canada places a temporary variable-type levy or surcharge (the so-called value-for-duty surcharge) on agricultural imports which are felt to be disrupting orderly domestic marketings. Most of these surcharges, seasonal in nature, have been placed on fruits and vegetables in past years.

Livestock, meat, and meat preparations.—The United States and Canada carry on a substantial amount of two-way trade in these commodities, mostly in carcasses or cuts, but also in live animals. Movement across the border is virtually unrestricted, except for a Canadian ban on imports of hogs other than purebred.

In general, trade flows in either direction in response to prices, including factors such as transportation costs, exchange rates, and tariffs. (The 1-year suspension or reduction of duties that went into effect on February 20, 1973, included most

<sup>2/</sup> Developments affecting the U.S. competitive position are analyzed in Canadian Imports of Horticultural Products, FAS-M226, For. Agr. Serv., February 1971.

Source: Statistics Canada and the Canadian Department of Agriculture

livestock and meat classifications.) However, Canadian exports of pork to the United States consist mainly of high-quality cuts, the demand for which is inelastic and not seriously affected by price differences.

In the past few years, Canada has become a net importer of beef, primarily boneless manufacturing-quality beef. The deficit in beef trade more than doubled in 1972, although domestic production of beef was up 2.5 percent.

Boneless beef from Australia accounted for the major share of the 1972 import gain, but U.S. exports of beef to Canada also rose drastically—by about 61 percent in value and 40 percent in volume. Nevertheless, the United States remains a net importer of beef from Canada, even though imports dropped in 1972. Canadian beef sold to the United States is mostly of manufacturing quality.

U.S. exports of bone-in beef go mainly to Montreal and Toronto for the hotel and restaurant trade. Exports of boneless beef move into deficit areas: Ontario, Quebec, and the Maritime Provinces.

In 1972, Canadian pork production was down, while domestic and export demand were strong. Sales to Japan, originating mainly from the Western Provinces, more than doubled. These developments helped push domestic prices up and stimulated a sharp increase in imports from the United States, but we retained our traditional position of net pork importer from Canada. U.S. pork exported to Canada goes mainly from the Midwest into the eastern provinces.

Most of the live animal movement across the border also is from Canada to the United States. Feeder cattle generally move from the Canadian prairies to the North Central States; slaughter cattle from Alberta to the Pacific Northwest. U.S. slaughter cattle go from the Midwest to the Toronto area and other parts of Ontario. Occasional exports of U.S. feeder cattle go to eastern Canada.

In the spring and fall of 1972, slaughter cattle were exported to Canada in relatively large numbers.

Cotton.—Raw cotton is the largest single U.S. export to Canada. A drop in sales in the first 5 months of the 1972/73 marketing season followed the replenishment of Canadian stocks a year earlier, the removal of Canada from eligibility for the U.S. raw cotton barter program, and tight supplies in the United States at the start of the season (the new crop did not reach the market until October).

U.S. cotton exports to Canada should pick up during the remainder of the marketing year. Canadian mill demand for raw cotton is up, partly as a result of the government policies to help the textile industry gain a larger share of the home market for textile manufactures.

However, U.S. sales may not reach last season's level and the U.S. share of the market for 1972/73 may decline to 70-80 percent, compared with 90 percent in 1971/72. Mexico should provide most of the remainder. (During August-December 1972, the United States supplied 68 percent, and Mexico 12 percent.)

Traditionally, the United States has been the main supplier of cotton to Canada. In the mid-1960's, however, relatively high prices and low supplies of U.S. cotton induced Canadian importers to buy more heavily from Mexico, the USSR, and other suppliers. By 1968/69, the U.S. share of the Canadian market dropped to a low 33 percent, while Mexico had 44 percent, and the USSR provided 15 percent. The substantial purchases of raw cotton from the USSR were made in years when Canada was exporting large amounts of wheat to the USSR.

In the late 1960's and early 1970's, international cotton prices increased, and the U.S. competitive position rebounded. By 1971/72, the USSR exported no cotton to Canada, and Mexico supplied only about 8 percent of the market. When enough cotton is available from the United States and quality and prices are competitive, Canadian buyers prefer to deal with their traditional American suppliers.

Soybeans and soybean products.—The United States is likely to remain virtually the only foreign supplier of soybeans and soybean products to Canada in the foreseeable future. However, U.S. exports face increasing competition from Canadian soybeans—output has more than doubled in the past decade—as well as from rapeseed. A relatively new crop in Canada, rapeseed is gaining a growing share of the Canadian market for vegetable oil and oilseed cake and meal. Rapeseed has also become a leading Canadian export, and is potentially a strong international competitor with U.S. oilseeds.

In the past, substantial quantities of soybeans imported into Canada were crushed for reexport to the United Kingdom. Soybean oil and cake enjoyed Commonwealth preferences in the United Kingdom, but soybeans did not. With the entry of the United Kingdom into the EC, preferential tariffs on soybean products have been eliminated and the incentive for pressing U.S. soybeans in Canada no longer exists.

Since Canada will encounter difficulties in maintaining exports of soybean oil to the United Kingdom, some observers anticipate that U.S. exports of soybean oil to Canada will also become increasingly difficult in the near future, and will eventually drop to zero.

Corn.--Exports of U.S. corn to Canada this marketing year could double the low 1971/72 level of 11 million bushels, which was due in part to a Canadian bumper crop. However, exports are not likely to return to the peak levels of more than 35 million bushels achieved in the 1960's. Canadian production has increased sharply in the past decade and indications are that it will continue to increase, resulting in reduced imports from the United States, which is virtually the only supplier.

Most imported corn is used in Ontario, Quebec, and British Columbia; these provinces are outside Canada's main barley-growing area.

<u>Hides and skins.--Hides and skins traditionally are not a major U.S. export to Canada, but a jump in value during 1972/73, because of rapidly rising world prices, accounted for a significant part of the overall gain in U.S. farm exports to Canada.</u>

Prospects for U.S. exports.—The value of agricultural sales to Canada is expected to remain at high levels in 1973 and beyond, but the rate of increase is likely to slow down for several reasons. The price of some commodities such as corn and soybeans may weaken in the next marketing year. With normal weather, Canadian producers of fruits and vegetables should be able to supply a larger share of total Canadian requirements for these products. Also, soybeans and soybean products are likely to meet with stronger competition from Canadian rapeseed in both the short and long run.

In addition, U.S. exports of horticultural products and, in some years, cotton are likely to face increased competition from those suppliers which have improved their competitive position in this market. This may also cause a small decline in the overall U.S. share of the market, which dropped a few percentage points in the 1960's.

U.S. agricultural imports from Canada. -- Canada's principal farm exports -- grains, oil-seeds, and tobacco--go mainly to markets other than the United States. However, since 1968 the United States has been the largest single market for Canadian farm exports, taking roughly 40 percent of exports other than wheat. We are virtually the only foreign outlet for many Canadian farm products.

Almost all U.S. agricultural imports from Canada are supplementary to U.S. production. The two countries exchange a few products processed from tropical crops (e.g., instant coffee), but there are very few, if any, primary commodities produced in Canada that are not produced, or could not be produced, in the United States.

Live animals (mainly cattle) and meat and meat preparations (table 14) account for about 40 percent of our agricultural imports from Canada. Other major imports include barley, bakery goods, and animal feeds. Imports of barley nearly doubled last year, but in general there have been no significant changes in the pattern of U.S. agricultural imports from Canada for the past several years.

U.S. farm imports from Canada have trended upward, but while the overall U.S. balance of trade with Canada has changed from a surplus to a large deficit, the United States retains a surplus in the bilateral balance of agricultural trade. 3/ The United States should maintain its favorable balance of agricultural trade with Canada in the foreseeable future.

The last two devaluations of the U.S. dollar do not appear to have had a significant impact on U.S.-Canadian trade in either direction. The value of the Canadian dollar has remained very close to that of the U.S. dollar, and this relationship should prevail in coming months.

<sup>3/</sup> Trade data used here are from U.S. statistics. A joint U.S.-Canadian Trade Statistics Committee has been at work to reconcile bilateral trade data. For 1970, the agreed result was a Canadian total trade surplus of US\$1.4 billion, compared with a Canadian surplus of US\$1.0 billion, based on Canadian statistics, and a Canadian surplus of US\$2.0 billion, based on U.S. statistics. Mutually agreed-upon figures for 1971 and 1972 should be available soon.

# SPAIN--A THRIVING COMMERCIAL CUSTOMER

TERREPORTE CONTRERENCIA DE CONTRERENCIA DE CONTRERENCIA DE CONTRERENCIA DE CONTRERENCIA DE CONTRERENCIA DE CONT

by James Lopes 1/

Spurred by increasing prosperity and the desire to increase supplies of agricultural products, particularly livestock products, Spain has become a large agricultural import market. Agricultural imports approached \$1.0 billion in 1971, and preliminary data indicate imports of about \$1.2 billion in 1972. These imports in 1971 were triple the level a decade earlier and represented about one-fifth of the country's total merchandise imports. Spain has also become a large agricultural exporter, shipping \$811 million worth in 1971, or more than one-fourth of total exports (table 15).

## U.S. Role as Leading Supplier

From 1955 to 1961, Spain obtained most of its agricultural imports from the United States under Title I, P.L. 480,  $\underline{2}$ / paying with pesetas rather than dollars. U.S. farm products to Spain during this period amounted to a cumulative total of \$861 million. Of this, \$753 million came under P.L. 480. U.S. shipments during this era peaked at about \$150 million in 1956 and in 1958.

Since 1961, Spain has rapidly shifted to commercial purchases of U.S. farm products, and is now one of our best dollar markets (table 16). In 1971/72, Spain was the seventh-ranking dollar market for U.S. agricultural products, receiving a record \$300 million in U.S. exports. This was 56 percent above the previous record in 1966 and just about double the 1961 level (table 17).

The United States exports a variety of agricultural products to Spain, though a few products dominate the market.

<u>Soybeans</u> are the leading U.S. farm export to Spain. Sales rose rapidly from insignificant amounts in 1961 to \$162 million in 1972, when they accounted for more than half of the agricultural export total. Purchases of this magnitude have made Spain the fourth-largest export market for American soybeans, after Japan, the Netherlands, and West Germany.

<sup>1/</sup> Agricultural Economist, Developed Countries Branch, Foreign Demand and Competition Division, Economic Research Service.

<sup>2</sup>/ The signing of the Pact of Madrid in September 1953 marked the beginning of the U.S. public assistance program with Spain.

Grain and grain preparation exports are also in the forefront, but have undergone drastic fluctuations. In 1961, large wheat shipments worth \$64 million followed poor crops in 1960 and 1961 boosted grain exports to \$90 million. Because of larger wheat crops after 1962, U.S. wheat exports to Spain declined rapidly to an average of less than \$10 million in the next 2 years, and virtually disappeared during 1965-70. The exceptional \$10 million U.S. wheat sales in 1971 were the result of a very poor Spanish wheat crop in 1970.

In the early and mid-1960's, diminished wheat exports were largely offset by increased exports of feed grains. By 1966, U.S. grain exports had returned to around \$90 million. However, as Spain's grain production continued to increase and other countries expanded in the feed grain market, exports of U.S. grains and preparations fell sharply to a low of \$5 million in 1971. In 1972, as a result of reduced domestic grain production and less foreign competition, U.S. exports of feed grains to Spain rose sharply to nearly \$80 million, nearly all in corn.

Spain, third-largest buyer of U.S. <u>tallow</u>, last year purchased \$13.5 million worth, representing 8 percent of total U.S. tallow exports. This represented nearly a two-fold increase over 1961 and was more than 50 percent over the 1965-71 average. Large quantities of tallow are used in mixed feeds.

Sales of U.S. cotton to Spain in the past 2 years reversed the rapidly declining trend of the 1960's; sales reached \$8 million in 1972. However, this was only one-third the 1961 level. Cotton consumption is increasing, but the increase has been covered by expanding domestic production and larger imports from other suppliers.

Spain has been a significant market for U.S. <u>animal feeds</u>, mainly soybean cake and meal. Exports of animal feeds reached a high of \$8.6 million in 1966, but declined rapidly in recent years as Spanish imports of U.S. soybeans reached record levels and Spanish oilseed crushing capacity expanded.

In 1969, domestic crushing of imported soybeans was restricted to the equivalent of 120,000 tons of soybean oil to promote disposal of surplus olive oil. This effectively slowed expansion of soybean imports and boosted soybean meal imports to nearly \$10 million in 1969. Because of a rapidly expanding export market for olive oil since 1969, this restriction has not been enforced. As a result, importers have reverted to importing more soybeans and curtailing imports of soybean meal. In 1972, exports of U.S. animal feed to Spain, nearly all soybean cake and meal, amounted to only \$4.6 million.

Other products such as <u>hides</u> and <u>skins</u> and <u>tobacco</u> have also contributed to larger U.S. agricultural exports to Spain. Exports of hides and skins have trended upward from less than \$1 million in 1961 to \$11 million in 1972. Also, Spain has been taking roughly \$6 million a year of U.S. tobacco to meet the growing domestic preference for cigarettes containing flue-cured and Maryland tobaccos.

## Spain's Expanding Agricultural Trade

Spain's agricultural trade has changed dramatically since 1961. The agricultural trade balance (customs basis) shifted from about a \$50 million surplus in 1961 to an average deficit of about \$175 million during 1965-71. Preliminary data for January-October 1972 indicate a 1972 agricultural trade deficit in the neighborhood of \$350 million, about twice as large as in 1971. The U.S.-Spanish agricultural trade balance has favored the United States, and has fluctuated between \$59 million and \$169 million since 1965 (table 17).

Spain's agricultural imports have more than tripled during the past 10 years. All major commodity groups except vegetable fats and oils have shown significant increases.

The most significant gains during this period have been recorded for feed grains and oilseeds. Substantial gains also have been recorded for meat and meat preparations, dairy products and eggs, fruits and vegetables, animal feed, and hides and skins (table 15).

The composition of Spanish imports has changed considerably during this period. Imports of wheat, vegetable oils, and cotton were very important in the early 1960's, but their share of total agricultural imports has declined sharply in recent years owing to increased domestic production. At present, the major imports are oilseeds (mainly soybeans), feed grains (mainly corn), meat and meat preparations, and tropical products such as coffee and tea. Agricultural imports of tobacco, natural fibers (mainly cotton), and feed concentrates continue to be important. In recent years, Spain has also become a large importer of hides and skins.

The rapid growth of Spain's livestock sector has increased demand for feed grains and other animal feed faster than domestic production. As a result, Spain's imports of feed grains rose to a record \$222 million in 1966, a fivefold increase over 1961. Because of the sharp increase in feed grain production since 1967, these imports declined rapidly to about \$140 million in 1970. However, the reduced use of surplus wheat for feed since 1970 and the smaller 1970 barley and oats crops forced Spain to import large quantities of feed grains in 1971. Preliminary data for 1972 show continued large imports of feed grains despite a significant increase in feed grain production in both 1971 and 1972. Spain's imports of corn in 1972 are estimated at 2.4 million tons compared with 2.1 million tons in 1971. More than the 680,000 tons of sorghum imported in 1971 also is likely to have been imported in 1972.

Spain also has been relying on imports of oilseeds, mainly soybeans, and protein cakes and meal to meet demand for mixed feeds. Actual mixed feed production is estimated at 5 million tons. Ten years ago, production was less than 1 million tons. As a result, imports of oilseeds have increased sharply and totaled over 1.3 million tons in 1971 compared with less than 20,000 tons 10 years ago. Soybeans account for the bulk of the oilseed imports.

In addition, vegetable oils from imported oilseeds are needed to fill a deficit in domestic production of edible oils. In 1972, Spanish consumption of vegetable oils reached an estimated 600,000 tons. Of this total, some 285,000 metric tons--less than half--was olive oil and the rest came from oilseeds, primarily soybeans. Soybean oil constitutes over a fourth of the edible oil total.

Although Spain is estimated to have crushed more than 1.5 million tons of oilseeds in 1971, the supplies of high-protein concentrates (for example oilseed cake and meal, or meat and fish meal) and other nongrain feed concentrates have not been sufficient to meet domestic requirements. Imports of these feeds increased rapidly, from \$9 million in 1961 to a high of \$44 million in 1969, then declined to \$34 million in 1971. Imports of vegetable cake and meal declined from 68,000 tons in 1961 to 37,000 tons in 1970. Meat and fish meal accounted for more than two-thirds of these feed imports in the past 2 years.

Expanding livestock output has not been able to greatly reduce the large deficit in Spanish livestock products. Since 1965, red meat production has nearly doubled, totaling more than 1 million tons in 1972. In the same period, cow's milk production has risen 60 percent to nearly 4 million tons. Meanwhile, the demand for red meat (production plus imports) has risen rapidly from 700,000 tons (23 kilograms per person) in 1965 to an estimated 1.3 million tons (44 kilograms per person) in 1972. Also, demand for milk and milk products has greatly exceeded domestic production. As a result, Spain has been importing about \$80 million worth of red meat (primarily beef) and \$20-40 million in dairy products in recent years.

The reduction in Spanish cotton production in the past several years has also meant substantially larger imports. In 1971, Spain imported \$56 million worth of cotton, or more than twice the level in 1961.

Significant import increases have also occurred for hides and skins. Since 1965, Spain has been importing between \$28 million and \$60 million worth of hides and skins a year to sustain its large exports of footwear.

Spain's agricultural exports slightly more than doubled in the past 10 years (table 15). Fruit (mainly citrus) and vegetables including processed products continue to account for most of Spanish agricultural exports, along with wine and olive oil. However, wheat and rice became significant exports, totaling about \$60 million a year during 1965-67.

# Growing U.S.-Spanish Trade

The United States is one of Spain's principal suppliers of agricultural products. During the 1960's the United States supplied between one-fourth to one-third of the value of Spain's agricultural imports. The largest share occurred in 1966, after a year of severe drought, when imports of U.S. farm products rose to a record-high \$250 million. In 1971, Spain's imports of U.S. farm products amounted to \$237 million, but represented only a fourth of total farm imports (table18). Based on U.S. export figures, Spain's imports of U.S. farm products in 1972 should be much higher than the 1971 level, and the U.S. share of the market should improve somewhat.

Several years ago, feed grains accounted for about half of total imports of U.S. farm products. During the late 1960's, this share declined to slightly less than one-fourth, and by 1971, was only 7 percent.

The U.S. share of the Spanish feed grain market has also moved rapidly downward in recent years. In the early 1960's, the U.S. supplied more than two-thirds of all arrivals. During 1965-67, this share declined to about half, although imports of U.S. feed grains reached a record high of \$124 million in 1966. By 1971, Spain's imports of feed grains climbed to \$200 million, but the U.S. share was only 3 percent. However, U.S. export figures showed a considerable upturn in Spainish imports of U.S. feed grains in 1972.

Corn accounts for the reduction in imports of U.S. feed grains during 1966-71. While Spain's imports of corn declined from 2.4 million tons in 1966 to 2.1 million tons in 1971, imports of U.S. corn dropped from 1.9 million tons to 53,000 tons in the same period.

Increased competition from Southern Hemisphere countries, particularly Argentina and Brazil, has been the major factor in our declining market share. Spanish feed grain imports from Argentina have trended rapidly upward from \$50 million in 1966 to \$125 million in 1971, and during the first half of 1972 were up a third over the comparable 1971 period. Brazil and France have also been offering stiff competition to U.S. corn. Spain's corn purchases from Brazil have increased rapidly from less than \$1 million in 1966 to \$31 million in 1971. Imports of French corn have declined in recent years, but in 1971 still amounted to \$14 million, only slightly less than in 1966.

Argentina continues to dominate Spain's grain sorghum market. In 1966, Argentina supplied 283,000 tons of grain sorghum, three-fourths of total imports. In 1971, Argentina supplied 530,000 tons, still more than three-fourths of total imports. Imports of U.S. grain sorghum were up in 1971 to 53,000 tons, but still were nearly a third below the 1966 level.

There is a strong preference for Plata corn on the Spanish market. In addition, U.S. prices often prove to be noncompetitive compared with corn from Argentina, South Africa, Brazil, and France (the last enjoying a most favorable position in this market by reason of proximity). Shipping problems (for example, the recent dock strikes) may present another reason for the dropping-off of U.S. sales.

## The U.S. Market for Spanish Farm Products

The United States is an important and growing market for Spain's agricultural products. U.S. agricultural imports from Spain in 1972 were up \$34 million to \$131 million, and double the average of the preceding 6-year period (table 17). The United States represents roughly a tenth of Spain's total agricultural exports. Olives, olive oil, and wine account for most of Spain's agricultural exports to the United States (table 19).

Olives--In 1971, the United States took \$50 million worth of Spanish olives. The United States has taken more than half of Spain's olive exports in recent years, and nearly all of our imported olives come from Spain.

Olive oil—While the U.S. share of Spanish olive oil exports has declined rapidly to less than one-fourth in recent years, values have trended slightly upward to \$11 million in 1971. During 1951-59, exports of olive oil to the United States amounted to about a third of Spain's total exports.

<u>Wine</u>--The United States has become a growing market for Spanish wines, taking \$8 million worth in 1971. This was double the 1969 level and represented one-tenth of Spain's wine exports.

#### Outlook

Further gains in production of livestock products would help meet consumer demand and curb Spain's price increases, as well as reduce outlays in foreign exchange. Imports of meat and dairy products amount to more than \$100 million a year. Thus, requirements of coarse grains, particularly corn, will probably continue to exceed domestic production, particularly if Spain strives for self-sufficiency in livestock products by the end of the 1970's.

Competitive conditions in the Spanish feed grain market will probably tend to favor other suppliers. Owing to a continued tight feed grain situation the United States likely will retain its prominent position in corn in this market in 1973/74. Beyond that period, we will have to offer some advantages such as credit and private trade agreements to retain a large market share.

Spain will continue to import larger quantities of soybeans to meet growing demand for high-protein feeds. While efforts are being made to expand sunflower and safflower production, prospects of increasing the level of self-sufficiency in oilseeds are very dim. Spain has not been able to grow soybeans at close to competitive prices.

Brazilian soybeans will continue to compete in the Spanish market, often offered at lower prices to compensate for the inadequacy and general uncertainty of supplies and longer delivery time. However, U.S. soybeans are expected to continue to dominate the Spanish market.

Other bright spots in the Spanish market for U.S. farm products are tobacco, hides and skins, tallow, and cotton. Dependence on U.S. <u>leaf tobacco</u> is expected to remain strong as a result of growing demand for American types of cigarettes. Attempts to

On the export side, the United States will probably continue to take an increasing quantity of olives, olive oil, spices, wine, and fruit and nuts. Also, Spain could possibly increase its share in the growing U.S. market for "gourmet", or "fancy" foods.

# Government Program Export Highlights

#### CALENDAR YEAR 1972

VECETER LE L'EXPERTE L'EXPERTE L'EXPERTE L'EXPERTE L'EXPERTE L'EXPERTE L'EXPERTE L'EXPERTE L'EXPERTE L'EXPERTE

U.S. agricultural exports in calendar year 1972 advanced to a new high of \$9.4 billion--\$1.7 billion above the previous year's record. All of the 22-percent gain was in commercial shipments. Exports under P.L. 480 were down slightly to \$1.065 billion. With the sharp increase in commercial sales, the proportion of P.L. 480 shipments of total U.S. farm exports dropped to around 11 percent, continuing the downward trend begun in 1962. Sales for local (foreign) currencies declined nearly \$105 million to \$70 million in 1972. South Vietnam, Cambodia, and the Republic of China were the only participating countries during 1972. This program was discontinued at the end of 1971. With these shipments, activity under the local currency sales program was nearly concluded. Cumulative local-currency exports under P.L. 480 programs totaled \$12.28 billion during 1955-72 and averaged \$682.4 million annually.

Long-term dollar and convertible foreign-currency credit sales continued to advance and totaled \$618.1 million in 1972, 19 percent above the previous year; they equalled 58 percent of total P.L. 480 shipments. There were exports to 26 countries under this program in 1972, with Israel, Pakistan, South Vietnam, Philippines, Indonesia, and the Republic of Korea the leading destinations. There were no exports under this program to India and Turkey, both major recipients in 1971. South Vietnam and Cambodia were the main new participating countries for 1972.

Government-to-government donations for disaster relief and economic development were up 70 percent in 1972 to total \$236 million. About 60 percent of total shipments were direct, with the remainder made available through various U.N. programs. Direct Government-to-government donations were shipped to 75 countries, spanning from \$5,000 to Barbados to \$28 million to Bangladesh.

Donations through voluntary relief organizations declined 7 percent from 1971 and totaled \$141 million. Since 1955, the value of exports under this program ranged from a low of \$111 million in 1959 to a high of \$187 million during 1956. Exports during the last 5 years averaged \$144.4 million. India was the largest single country recipient in 1972 and accounted for about 42 percent of the total.

Six commodities (wheat and flour, rice, dry milk, cotton, soybean oil, and corn) accounted for 85 percent of total Government-program exports in 1972. Compared with a year earlier, movements were lower for all commodities except for rice, corn, bulgur wheat, corn-soya-milk, wheat-soya-milk, soy flour, tobacco and cottonseed oil.

While the overall level of shipments under P.L. 480 has remained relatively constant in recent years, there has been a shift in the types of programs utilized by the various countries. With the phasing out of the Title I foreign-currency program, importers have either made greater use of the long-term credit sales program,

increased their commercial purchases, or both. U.S. commercial sales in 1972 totaled \$8.3 billion, an increase of over 70 percent since 1969 and 26 percent above last year. Commercial sales to the developed countries in 1971 and 1972 increased about 2 percent and 20 percent, respectively, while those to the developing countries were up 13 percent in 1971 and 20 percent in 1972. Several countries, Republic of China, Republic of Korea, and Iran, for example, whose imports of U.S. farm products formerly were financed largely under P.L. 480 have moved to greater commercial purchases.

# Exports Under Supply-Type Barter Contracts and Credit Sales Program

Farm products bartered for overseas procurement for U.S. agencies declined 5 percent from last year's record level and totaled \$889 million. There were reduced shipments of wheat, barley, tallow, grease, cotton, cottonseed oil, and soybean oil. Shipments under the CCC short-term credit sales program and Export-Import Bank loans and mediumterm guarantees totaled \$637.1 million, up nearly 37 percent. Shipments under Export-Import loans and medium-term guarantees declined 27 percent to \$69.0 million, while those under the CCC credit sales program increased over 50 percent to \$568.1 million. Three commodities, wheat, corn, and cotton, accounted for over three-fourths of total credit sales.

During 1972, shipments under the credit sales program were made to 46 countries, seven more than in the previous year. Of these additional countries, shipments to the USSR, Pakistan, and Egypt accounted for over 85 percent of the increase.

Exports under these programs are classified as commercial sales or "exports outside Government-financed programs." Such trade results in dollar savings in the U.S. balance of payments. CCC credit sales and Export-Import Bank loans and guarantees help to increase the competitive position of U.S. farm products in major markets with credit arrangements similar to those of other supplying nations.

There were no agricultural exports under barter contracts for strategic materials in 1972.

#### Commodity Review

Except for rice, feed grains, and tobacco, exports under Government programs as a share of total exports registered declines in 1972. Value declines were recorded for wheat and flour, cotton, oilseeds and products, dairy products, and animal products.

Wheat and wheat flour under Government programs in 1972 declined about 5 percent from the previous year and totaled \$355.9 million; a fourth of total wheat and flour exports. During 1971, exports under Government programs accounted for a third of the total.

Sharply reduced sales for local currency more than offset the increases recorded for other programs. During 1972, local currency sales totaled only \$9.7 million compared with \$68.1 last year. Long-term dollar credit sales totaled \$241.3 million, 5.4 percent above the 1971 level.

Rice exports were up 52 percent in 1972 to \$388.1 million, with Government program shipments accounting for nearly four-fifths of the increase. Sales for local currency declined nearly 40 percent to \$12.8 million, while those sold under long-term dollar credit and Government-to-government donations increased \$110.6 and \$32.5, respectively. Exports of rice under Government programs, at \$238.2 million, accounted for 61 percent of total rice exports compared with 52 percent during 1971.

Feed grain exports were up 57 percent in 1972 and totaled \$1.52 billion. Nearly all of the increase was due to commercial sales as Government-program shipments totaled

only \$91.4 million, and increase of \$16.7 million from the 1971 level. All of the increase under Government programs was in long-term dollar credits sales. Local currency sales totaled only \$3.5 million, 39 percent below 1971.

Cotton exports declined nearly 14 percent in 1972; as commercial sales were off nearly 5 percent and Government-program shipments were down 46 percent. Sales for local currency declined to \$15.9 million, down 63 percent from 1971, while long-term dollar credit sales were reduced 38 percent to \$53.8 million. Exports under Government programs totaled \$69.7 million compared with \$129.7 million in 1971.

<u>Tobacco</u> exports were up sharply in 1972 and totaled \$672.0 million. Exports under Government programs were up 27 percent but accounted for only 4 percent of the total. Sales for local currency totaled only \$12.6 million, down 16 percent, while dollar credit sales increased 124 percent to \$15.0 million.

Oilseed and product exports increased about 10 percent and totaled \$2.41 billion in 1972. All of the increase was for dollars, as exports under Government programs declined 4 percent to \$112.2 million. Local currency sales totaled \$6.6 million, up \$2.0 million; dollar credit sales, \$39.4 million, down \$29.0 million; and Title II donations, \$66.2 million, up \$30.5 million.

Dairy product exports declined 24 percent during 1972 as both commercial and Government-program exports declined. Sales under Government programs totaled \$74.6 million compared with \$100.5 million during 1971. Sales for local currency declined 52 percent and \$7:3 million, and those under Title II donations were down 22 percent to \$66.5 million.

Animal and animal product exports (excluding dairy products) were up a fourth in 1972 and totaled \$996.1 million. All of the increase was commercial, as exports under Government programs totaled only \$400,000 compared with \$39.7 million in 1971.

Fruits, vegetables, and preparation exports have been all commercial sales during the past 2 calendar years.

Commercial and Government-program exports of U.S. farm products for July-December 1972 are summarized in tables 33-38.

Shipments under overseas procurement barter contracts are authorized by the CCC Charter Act and are essentially equivalent to dollar sales since they offset the dollar outflow for foreign purchases by U.S. agencies with a dollar inflow for agricultural commodities.

<sup>2/</sup> Shipments under Export-Import Bank loans and guarantees and under the CCC credit sales program are credits for relatively short periods repayable in dollars plus interest (covering the costs of the lending agency).

2/ Total exports include those reported by Census plus foreign donations through voluntary relief agencies. Relief shipments of these commodities are not separately reported by Census.

2/ The excess of Government program shipments over total exports may be attributed to lags in reporting or to differences in classification procedures.

3/ Total exports include those reported by Census plus Government-to-government donations. Nonrelief shipments of these items are not separately reported by Census.

4/ Reported in value only.

5/ Less than \$50,000.

<sup>1/</sup> Credit for relatively short periods repayable in dollars plus interest (covering the financing costs of the lending agency).

<sup>2/</sup> Includes disbursements by the Export-Import Bank and disbursements by U.S. commercial banks under Export-Import Bank medium-term guarantees against political and/or financial risk.

### International Price Highlights

#### SELECTED PRICE SERIES OF INTERNATIONAL SIGNIFICANCE

Prices of leading U.S. agricultural export products in the United Kingdom were down significantly in February. Superficially, this seemed to reflect the devaluation of the dollar announced on February 12. Monthly average prices of wheat and corn were both down 9 percent and the price of soybeans was down 13 percent (table

Actual price movements, however, were more complex. The c.i.f. U.K. price of U.S. Hard Winter wheat began to decline in late January. From mid-December through January 19, that price had been on a plateau of 48.25 - 49.50 pound sterling a long ton. By February 9--still prior to devaluation--the price had dropped to 44.50 pounds; it continued to decline to 40.50 pounds after devaluation, but rallied to 42.50 pounds during the last week of February, averaging 43.77 pounds for the month. Similarly, the export price of U.S. No. 2 Hard Winter wheat, f.o.b. Gulf ports, ranged narrowly from \$2.86 to \$2.99 a bushel from mid-December through January, dropped to \$2.49 during the first half of February, and rallied to \$2.90 in late February and early March.

Australian wheat, c.i.f. U.K., despite its scarcity, dropped almost as much in price as U.S. wheat, from 48.95 pounds a long ton in January to 44.92 pounds in February. During 1971, the price of U.S. No. 2 Hard Winter wheat, c.i.f. U.K., had averaged 9 percent above that of Australian wheat in the same position. Following the U.S. dollar devaluation in December 1971, U.S. and Australian wheats were quoted at virtually identical prices. In January 1973, scarce Australian wheat was priced 1.6 percent higher than U.S. wheat. In February, this premium increased to 2.6 percent.

In contrast to the drop in U.S. and Australian wheat prices, Canadian wheat quotations were up, although only fractionally, both in store, Fort William-Port Arthur-Thunder Bay, and c.i.f. U.K.

Throughout February, the c.i.f. U.K. price of yellow corn slid from its January record level. In contrast, the export price of such corn, f.o.b. Gulf ports, was up 3.5 percent to \$2.06 a bushel (\$81.10 a metric ton), and the margin between c.i.f. U.K. and Gulf quotations narrowed to \$6.76 a metric ton compared with \$14.92 in January and a 1972 average of \$9.57.

Despite the large size of the Argentine corn crop now being harvested, such corn was not quoted on a c.i.f. U.K. basis; but during February, the c.i.f. Rotterdam price, quoted in dollars, was 5 percent below January. Sorghum grain, similarly, was not quoted on a c.i.f. U.K. basis; but the average c.i.f. Rotterdam price for Argentine and U.S. sorghum grain was down 3 percent. The weekly price quotations for U.S. sorghum grain during January and February ranged from 0 to 2 cents a bushel above those for Argentine sorghum grain.

The export price of Thai rice averaged \$198 a metric ton in February, a level last attained in mid-1969. Weekly prices rose above \$200 during the second half of February and the first week of March. Very limited supplies of rice continue to be in strong demand, particularly in Asia.

Soybeans from the 1972 crop are not longer quoted on a c.i.f. U.K. basis. Their last quotation was on January 30, 1973, at 104.20 pounds sterling a long ton (\$244 a metric ton). During the second half of February, 1973 crop soybeans for November arrival were quoted at an average price of 83.18 pound sterling a long ton, 13 percent below the average January quotation for May arrivals. U.S. soybean meal, c.i.f. Rotterdam, continued to be quoted on a current basis at a February average price of \$257 a metric ton, exactly twice the 1972 average price and 17 percent above the January price.

The price of American cotton, Memphis Territory, straight middling, 1-1/16 inches, c.i.f. Liverpool, rose to 43.5 cents a pound, 3 percent above January and 4 percent above a year earlier.

Among imported products, an 8.83 cent-a-pound, 11.5-percent January-February rise in the price of imported cow meat was most noteworthy. The February price was 27 percent above November, and above the relatively stable price level that prevailed during most of 1972. The Secretary of Agriculture recently confirmed as upto-date his initial estimate of 1.450 billion pounds of prospective imports of meat in 1973, under the meat import quota law, P.L. 88-482. All restrictive features of that law have been lifted. Its only operational feature is the estimation of prospective imports; these are 7 percent above actual 1972 imports.

The coffee price increased 4 percent over January and was one-third higher than a year earlier. The month-to-month rise in the price of cocoa beans was 5 percent, and the February price was almost 1 1/2 times as high as a year earlier.

Sugar prices dropped, both on the world market and on the U.S. market, but world market sugar still sold at 1.20 cents a pound more than sugar destined for the U.S. market; the average differential (or "negative quota premium for U.S. sugar") during the 3 months, November 1972-February 1973, was also 1.20 cents.

The rubber price rose 10 percent to 25.2 cents a pound. Further heavy price increases were reported in March. Consequently, the U.S. Government was asked by rubber manufacturers to accelerate disposal of the quarter-million long-ton natural rubber stockpile from the current annual rate of 50,000 tons.

## **Export Highlights**

#### AGRICULTURAL EXPORTS UP 41 PERCENT IN JULY-FEBRUARY

For the fifth month in a row, U.S. agricultural exports set a new monthly record. February shipments of \$1.18 billion were 4 percent above January 1973 and 65 percent above February 1972. The February record stemmed from sharp gains in exports of wheat, feed grains, soybeans, soybean meal, cotton, and cattle hides.

Exports for the first 8 months of 1972/73 hit an alltime high of \$7.48 billion--41 percent above a year earlier. The value increase in grains alone accounted for nearly two-thirds of the total gain in July-February. In addition, soybeans, cattle hides, meats, soybean meal, nuts, cotton, poultry products, fruits, and vegetables also rose substantially. Tobacco exports were about equal to the level of a year earlier, while dairy products, animal fats and oils, and vegetable oils declined.

Total volume of U.S. agricultural exports gained about one-fourth and accounted for nearly 60 percent of the total value gain in July-February. Over two-fifths of the value increase was from higher prices. Substantial price increases occurred for soybeans, soybean meal, grains, most fruits and vegetables, cattle hides, tobacco, and nuts (see table 40).

With the exception of the 13-percent decline in exports to Africa, all major areas shared in the substantial rise in U.S. agricultural exports during July-February, see tables 42, 43, and 44.

Grains and preparations--U.S. exports of grains and preparations rose 86 percent to \$3.0 billion in July-February 1972/73. All major grain products were up, but feed grains and wheat accounted for most of the increase. Nearly three-fourths of the value increase in grains and preparations stemmed from larger volume and the rest from higher prices. During July-February, for example, wheat prices rose to \$1.87 cents per bushel from \$1.68 cents per bushel a year earlier, feed grain prices rose to nearly \$60 per metric ton from \$55 a year earlier, and rice prices jumped to \$216 a ton from \$183.

Exports of feed grains rose to 22.2 million tons, up from 13 million tons for the like period a year earlier. Exports to Japan rose by nearly 3 million tons to 5.3 million in July-February. Japan is increasing its purchases of U.S. feed grains this year because of reduced supplies available from Thailand and Australia. In 1971/72, Japan utilized about 1½ million tons of surplus rice for mixed feeds, but this year the Japanese allocated only one-half million tons of rice for mixed feeds. USSR purchased 2.2 million tons in July-February compared with 872,000 for the same months a year earlier. Exports also rose to the enlarged European Community (EC), primarily the United Kingdom and Italy. Italy took 1.6 million tons compared with 950,000 tons a year earlier. Other major increases have occurred to the People's Republic of China, Taiwan, Indonesia, and Mexico. Exports to Mexico rose to 379,000 tons from only 21,000 a year earlier. Most other Latin American countries have stepped up their taking of U.S. feed grains in July-February. Feed grain exports rose to 1.2 million tons compared with 438,000 a year earlier.

: Total::	:		5,568		80,145

Exports of wheat and products rose 82 percent to 707 million bushels in July-February. Of course, the big increase has occurred in shipments to USSR, which totaled 175 million bushels in July-February compared with less than a million a year earlier. Other substantial increases have occurred to Japan, South Korea, Taiwan, Bangladesh, Pakistan, Yugoslavia, Mexico, Brazil, and the EC. Exports to most African countries are off somewhat, reflecting better crop conditions during the current year than a year earlier. The People's Republic of China purchased 20 million bushels of U.S. wheat during July-February compared with none a year earlier.

Oilseeds and products--U.S. exports of oilseeds and products rose 29 percent to \$1.95 billion during July-February 1972/73. Around 71 percent of the value increase was in soybeans. World supplies of protein meal have been very tight during the current fiscal year with the sharp reduction in fishmeal output in Peru and smaller output of peanut meal in Africa and Asia. Demand, on the other hand, has gained with the continued growth in livestock production in Western Europe and Japan. In addition, USSR purchased 1 million tons of U.S. soybeans during the current year.

U.S. soybean exports during July-February increased 11 percent to 334 million bushels, but higher prices pushed value up by one-third. Most of the increase has occurred to the EC, United Kingdom, USSR, Eastern Europe, Israel, and South Korea. This year, over half of U.S. soybean production will be destined for the foreign market in the form of meal or soybeans.

U.S. exports of oil cake and meal rose 5 percent to 3.3 million short tons in July-February. Value rose by two-fifths. Most of the increase went to Switzerland, Yugoslavia, Greece, Eastern Europe, and Japan.

Exports of cottonseed and soybean oil totaled 1.05 billion pounds during July-February 1972/73, down 273 million pounds from a year earlier. The decline has occurred in soybean oil, while cottonseed oil gained because of plentiful U.S. supplies. More cottonseed oil was exported to the United Kingdom, Iran, Japan, Egypt, and South Africa. But shipments to Egypt alone increased by 60 million pounds and accounted for most of the overall gain.

Fruits and preparations--U.S. exports of fruits and preparations gained by nearly one-fourth to \$295 million. Higher prices accounted for about three-fifths of the total value increase. Values were increased for canned fruits, fresh fruits, and fruit juices. The value of dried fruit exports were up 9 percent, while quantity was down sharply because of reduced supplies in the United States. Most of the increase has occurred in fresh fruits, primarily citrus fruits. Exports of citrus products are benefiting from a plentiful U.S. supply. In addition, U.S. prices are especially attractive after the recent devaluation.

<u>Vegetables</u> and <u>preparations</u>--U.S. exports of vegetables and preparations rose 17 percent to \$172 million. As in fruits, most of the increase occurred for fresh products. However, exports of canned vegetables and dehydrated vegetables also showed substantial gains. Exports of pulses were also up slightly. Hop exports, on the other hand, were down substantially because of increased supplies in Western Europe. Western Europe imported large quantities last year because of a poor harvest.

Animals and animal products—Exports of animals and animal products gained one-fourth to \$822 million in July-February 1972/73. Cattle hides, totaling \$247 million, more than doubled the level of a year earlier and accounted for most of the other overall increase. Other increases occurred for meats, poultry products, live cattle, and horses. Offsetting these gains were declines in dairy products and animal fats and oils. Exports of poultry products increased by over one-fifth to \$64 million, with turkeys, canned poultry, and egg products showing the largest gains.

Tobacco--U.S. agricultural exports of tobacco in July-February rose 1 percent in value to \$441 million, but declined 5 percent in quantity to 405 million pounds. Flue-cured tobacco fell to 269 million pounds from 285 million a year earlier, and bulk smoking tobacco to 14 million from 24 million. Exports in February 1972 were 90 million pounds, reflecting delayed shipments from the strike during October-November. Exports this year are following a more normal seasonal pattern. The volume of exports gained to the United Kingdom, Thailand, Japan, New Zealand, and Australia. The decline in flue-cured tobacco was to the EC, especially to the Netherlands, West Germany, and Italy. Declines in bulk smoking tobacco occurred to the Netherlands, Switzerland, Australia, and the Dominican Republic. Competition has been increasing in the principal tobacco markets as production expands in many of the developing countries. In addition, the uncertainty as to Rhodesia's role as a tobacco exporter caused many importers to buy for only current needs. In addition, higher U.S. tobacco prices have slowed the growth in U.S. exports in recent years.

Cotton--U.S. cotton exports rose to 2.5 million running bales in July-February from 2.3 million for the like months a year earlier. Exports have expanded sharply in recent months, with the 528,000 bales in February and the 654,000 in January. The increase has occurred to the EC, South Korea, Hong Kong, Japan, and Ghana. Demand for U.S. cotton has strengthened in recent months as supplies in major foreign exporting countries have been somewhat smaller, and consumption somewhat larger, than first anticipated. Furthermore, the People's Republic of China reportedly has purchased large quantities of U.S. cotton for shipment during the current year.

<sup>1/</sup> Grains, poultry, and pork were subject to variable levies beginning on July 30, 1962; rice, on Sept. 1, 1964; and beef and dairy products, on Nov. 1, 1964. 2/ Lard for food is a variable-levy commodity, while lard for industrial use is bound in the General Agreement on Tariffs and Trade (GATT) at 3 percent ad valorem. U.S. lard is for food use. 3/ Although canned poultry, tallow, and variety meats are subject to variable levies, these cannot exceed the amount of import duties bound in GATT. 4/ Variable levy on sugar-added content. 5/ Mainly corn gluten feed and meal, which are nonvariable-levy commodities; but may contain small quantities of other corn products, subject to variable levies (see "Export Highlights, March 1970").

<sup>1/</sup> Grains, poultry, and pork were subject to variable levies beginning on July 30, 1962; rice, on Sept. 1, 1964; and beef and dairy products, on Nov. 1, 1964. 2/ Lard for food is a variable-levy commodity, while lard for industrial use is bound in the General Agreement on Tariffs and Trade (GATT) at 3 percent ad valorem. U.S. lard is for food use. 3/ Although canned poultry, tallow, and variety meats are subject to variable levies, these cannot exceed the amount of import duties bound in GATT. 4/ Variable levy on sugar-added content. 5/ Mainly corn gluten feed and meal, which are nonvariable-levy commodities; but may contain small quantities of other corn products, subject to variable levies (see "Export Highlights, March 1970").

## Import Highlights

HIGHER PRICES CAUSED 13-PERCENT INCREASE IN U.S. AGRICULTURAL IMPORTS

Imports of agricultural products for July-February 1972/73 amounted to \$4.5 billion, 13 percent above last year. The advance was due to price increases. Import volume, measured by the quantity index, remained at last year's level of 118 (1967=100). Value increases raised competitive imports by 16 percent to \$2.9 billion. Noncompetitive items were 8 percent higher at \$1.6 billion. Sharply higher prices for livestock products and coffee accounted for much of the value expansion.

Cattle entries were a fourth higher at 868,000 head, while value jumped by almost half to \$133 million. Beef and veal volume advanced 17 percent to nearly 1.1 billion pounds, but higher prices raised value by 26 percent to \$655 million. Fresh and frozen beef inflows responded to increased demand and suspended voluntary restraints, gaining a fifth in volume to 976 million pounds. Price rises pushed value up 35 percent to \$581 million. Average import unit values for fresh and frozen beef of 62 cents per pound in February compared with 52 cents in February 1972. Pork imports fell slightly to 250 million pounds, while escalating prices raised value 7 percent to \$199 million.

Dairy product imports gained nearly one-third, totaling \$120 million. Cheese purchases were up one-fourth to 129 million pounds and value expanded 31 percent to \$78.8 million. Nonfat dry milk entries jumped sharply to nearly 27 million pounds (\$8.3 million) from insignificant levels last year.

Fruit and vegetable imports rose to \$329 million, nearly one-fourth above the previous year's value. Apples, grapes, oranges, pears, raisins, plums, fruit mixtures, juices other than apple and orange, and most fresh and canned vegetables showed increases. Fresh tomato volume leveled, but canned tomato products were up strongly. Canned mush-room imports doubled. Wine purchases advanced more than a fourth, to \$154 million.

Nursery stock inflows advanced 23 percent to nearly \$20 million. Flower bulbs, which account for two-thirds of nursery stock imports, gained only 9 percent in volume, but value jumped 43 percent to \$15 million. Grass and vegetable seed imports were up one-fourth in volume and over one-third in value.

Noncompetitive imports, dominated by coffee, were up moderately in value, but volume declined about 6 percent below July-February 1971/72. Green coffee value stood 9 percent above last years level, whereas volume lagged 8 percent to 1.9 billion pounds. Cocoa beans, natural rubber, and tea entries were well behind year-earlier rates. Conversely, bananas, soluble coffee, roasted and ground coffee, cocoa products, crude drugs, essential oils, raw silk, and spices advanced. Higher prices raised carpet-wool import values, while volume was below last year.

<sup>1/</sup> Supplementary agricultural imports consist of all imports similar to agricultural commodities produced commercially in the

L/ Supplementary agricultural imports consist of all imports similar to agricultural commodities produced commercially in the United States together with all other agricultural imports interchangeable to any significant extent with such United States commodities. Complementary agricultural imports include all others, about 98 percent of which consist of rubber, coffee, raw silk, cacao beans, wool for carpets, bananas, tea, and vegetable fibers.

2/ Based on 430 classifications in 1971.

3/ The seasonal adjustment series has been revised to incorporate the Bureau of the Census Method X-11. The new method of adjusting for seasonal variations is a continuing system which takes into account changing seasonal patterns. For detailed explanation of the new adjustment procedures, see U.S. Department of Commerce, Bureau of the Census, The X-11 Variant of the Seasonal Method II Seasonal Adjustment Program, Technical Paper No. 15, U.S. Government Printing Office, Washington, D.C., 1965.

U.S. foreign agricultural trade statistics in this report include official U.S. data based on compilations of the Bureau of the Census. Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture such as raw hides and skins, fats and oils, and wine. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the island possessions, between Puerto Rico and the island possessions, among the island possessions, and intransit through the United States from one foreign country to another when documented as such through U.S. Customs.

EXPORTS The export statistics also exclude shipments to the U.S. armed forces and diplomatic missions abroad for their own use and supplies for vessels and planes engaged in foreign trade. Data on shipments valued at less than \$251 are not compiled by commodity and are excluded from agricultural statistics but are reflected in nonagricultural and overall export totals in this report. The agricultural export statistics include shipments under P.L. 83-480 (Agricultural Trade Development and Assistance Act), and related laws; under P.L. 87-195 (Act for International Development); and involving Government payments to exporters. (USDA payments are excluded from the export value.) Separate statistics on Government program exports are compiled by USDA from data obtained from operating agencies.

The export value, the value at the port of exportation, is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port. The country of destination is the country of ultimate destination or where the commodities are to be consumed, further processed, or manufactured. When the shipper does not know the ultimate destination, the shipments are credited to the last country, as known to him at the time of shipment from the United States, to which the commodities are to be shipped in their present form. Except for Canada, export shipments valued at \$251-\$499 are included on the basis of sampling estimates; shipments to Canada valued at \$251-\$1,999 are sampled.

IMPORTS Imports for consumption are a combination of entries for immediate consumption and withdrawals from warehouses for consumption. Data on shipments valued at less than \$251 are estimated on the basis of a 1-percent sample and are not compiled by commodity. They are excluded from agricultural statistics but are reflected in nonagricultural and overall import totals in this report.

The <u>import value</u>, defined generally as the market value in the foreign country, excludes import duties, ocean freight, and marine insurance. The <u>country</u> of origin is defined as the country where the commodities were grown or processed. When the country of origin is not known, the imports are credited to the country of shipment.

Imports similar to agricultural commodities produced commercially in the United States and others that are interchangeable in use to any significant extent with such U.S. commodities are supplementary or partly competitive. All other commodities are complementary or noncompetitive.

Further explanatory material on foreign trade statistics and compilation procedures of the Bureau of the Census is contained in the publications of that agency.
